

Maher Hussain

Full stack web developer

➤ ABOUT

I am an energetic and imaginative web developer who can work alongside other professional developers in creating websites of very highest standards.

I have learned web development in web-it school and in HackYourFuture (code bootcamp).

During my education I have implemented many projects using .Net MVC5 –Node.js- React.js- and JavaScript (ES6). Moreover, I am fast at learning and adapting to new technologies within web development.

Personally, I am ambitious and want to get the chance to show my skills and I have the drive and massive energy needed to really make a difference to a project.

Right now, I am looking for an entry-level position with an exciting company that wants to attract talented people.

Turkish: Conversational

NOTEWORTHY PROJECTS

➤ **Web dev rooms:**

Full stack final project in “HackYourFuture” course 2020

“Web dev rooms” is a project for management study groups that happen weekly in HackYourFuture organization. The project was built using react.js as front-end and Node.js as back-end and we have used many technologies and tools such as storybook to manage UX components and express.js and knex.js. the most of my work in this project was back-end and creating data seeds and data migration. And I worked also in some front tasks.

➤ **My portfolio “react and Sanity “ 2021**

I have built a new portfolio using react and sanity, in this portfolio I used react hooks such as useState and useEffect and I managed the data by using sanity headless content management. You can see this project and more projects [here](#)
